

WATER CARE PRODUCTS – Söll

In addition to our innovative and highly effective assortment of water care products for ornamental and fish ponds.

We offers high-quality and reliable pond water treatment products with which you can handle 98% of all ponds problems – Söll has been offering such products for years. Söll stands for innovations and competence in keeping water of your pond healthy and clear. Söll presents its extensive range of ecologically sensitive pond water treatment products: to start a new pond, basic care products, products against algae and micro-biological products.

AlgoSol And AlgoSol Forte

The special agent against algae :

- *immediate aid – even by strong algae plague*
- *special substance SpektroSorb*
- *reduces new formation of algae*
- *for crystal clear water*

AlgoSol is effective against all algae species, limiting their growth.

Due to the use of SpectroSorb, the algae photosynthetic activity is blocked. Hence, the algae will starve. When AlgoSol is used on a regular basis, algae will be effectively removed from your pond.

AlgoSol is free of humic acids and does not contain nitrogen compounds.

Ammonia Alarm

an innovative colour device for continuously detecting toxic free ammonia in marine and fresh water.

- *Simply placed in the water of the aquarium, indicates the level of the ammonia*
- *(already starting from 0,02 mg/l) and helps to prevent critical situation.*
- *For marine and fresh water aquariums*
- *Does not require extra care*

Ammoniac Alarm is an innovative colour device for continuously detection toxic free ammonia in marine and fresh water. A sensor changes from yellow to green to blue, relative to the ammonia concentration. It lasts for at least one year.

USE ALGICIDES SAFELY

Always read the label and product information before use .

Bio-Booster

Living micro organisms for your pond filter

- *highly effective micro organisms for cleaning pond water*
- *eliminates harmful nitrogen-compounds*
- *shortens time to establish biological processes in filter units*
- *supports effectiveness of stressed filters*
- *immediate biological activity in the pond*

Bio-Booster is a product, consisting of useful strains of micro organisms, as they are purifying the waters on earth since millions of years.

All that we do, is to selectively breed these bacteria and mix them with each other in the right proportion. The result is strong team to decompose organic and inorganic compounds improving the water quality of your pond.

FishMineral

Provides wellness for your fish

makes ideal pond water out of tap-, rain- and well water

neutralises toxic elements for fish like ammonia and nitrite

helps to prevent fish from parasitical diseases (e.g. Ichthyophthirius multifiliis)

fish becomes more resistant against hostile environmental influences

immediate stabilisation of ideal pH-levels

FishMineral contains active oxygen which purifies the water and removes bad odours often caused by toxic gases from rotting organic substances.

FishMineral has a stabilising effect on the water and offers prevention against dangerous parasites which infect the fish. FishMineral increases the biotopes water quality and its capability of self purification due to its high-quality combination of active substances. FishMineral reduces the

toxicity of nitrite for fish.

In case of ammonia pollution FishMineral provides immediate aid due to its ability to lower the pH in a pond.

KoiStable

improves water quality in only 15 minutes

- *optimum conditions for Koi ponds*
- *healthy fishes with brilliant colours*
- *ammonia and harmful dissolved metals are neutralised*
- *immediate stabilisation of ideal pH-levels*

KoiStable cares for ideal water quality. It is a special product used to ensure the healthy development of sensitive Koi, protecting them from stress and illnesses. During the treatment with KoiStable your fish may stay in the water.

Oxygen-Active

Immediately regulates oxygen balance in pond water

- *treatment of serious oxygen deficit in water*
- *regulates oxygen balance in water*
- *prevents formation of digester gas*
- *optimises conditions for self-purifying capacity*

Oxygen-Active regulates the oxygen balance in the pond water. Oxygen-Active promotes the oxidation of waste products suppressing the production of anaerobic gases (e. g. ammonia of hydrogensulfide). Aerobic bacteria are working faster and more effectively when they are supplied with oxygen for their metabolism. Oxygen-Active prevents the deterioration of ponds and stabilises the biological equilibrium.

PhosLock

Eliminates nutrients for algae growth

- ***Provides long lasting phosphate binding therefore preventing algae growth***
- ***Long-term oxygen release***
- ***Enhances decomposition of pond sediments***
- ***Use 100g per 2000L of pond water***

PhosLock binds phosphate and forms an insoluble mineral. In nature, phosphate is the limiting nutrient for algae in the water. By using PhosLock the crucial nutrient supporting algae growth removed.

PhosLock oxidises the sediment in ponds and biotopes, preventing the accumulation sludge.

Pond Essential

Basic care product for your ornamental pond

- *provides the basic care for your ornamental pond or outdoor waters.*
- *Increases carbonate hardness of pond water*
- *Establishes ideal water pH*
- *Provides a long-term pH-stabilisation*
- *Immediately eliminates toxic metals and reduces ammonia*

Pond Essential provides the basic care for your ornamental pond or outdoor waters.

Pond Essential establishes an equilibrium pond water within minutes offering fish, water plant and other animals ideal living conditions. Pond Essential enhances biological purification of water, promotes the growth of useful organisms and supports the decomposition of harmful substances. Pond Essential adjusts the water pH between 7.5 and 8.3. Pond Essential stabilises the water by raising the buffering capacity and carbonate hardness. Harmful heavy metals will be removed from the water by precipitation. The toxic effects of nitrite are reduced due to calcium, contained in Pond Essential. Pond Essential also offers immediate help in case of ammonia toxicity.

Pond-Starter

Universal water conditioner

- *makes ideal pond water out of tap-, rain- and well water*
- *neutralises toxic elements for fish like ammonia and nitrite*
- *helps to prevent fish from parasitical diseases (e.g. Ichthyophthirius multifiliis)*
- *fishes become more resistant against hostile environmental influences*
- *makes water free from bad odour*

Pond-Starter conditions acidic, soft or instable water, adding carbonate hardness and providin healthy pond water. Pond-Starter makes this water suitable for water organisms, fish, other animals and plants. Pond-Starter eliminates chlorine, dissolved metals (e. g. copper and lead fr distribution pipes) and reduces the water corrosion.

Floral Booster

Supplies nutrients and trace elements for aquatic plants

- ***adds nutrients and trace elements for plants to the water***
- ***prevents oligotrophic situations in ponds***
- ***accelerates plants growth and strengthens cell-structure of plants***
- ***improves resistance of plants against environmental influences***
- ***does not contain phosphate***

Floral Booster supplies water plants with essential nutrients and trace elements. It consists of iron, easily and quickly taken in for water plants, is necessary for many important processes an supports growth, healthy appearance of water plants. The proportion of every single nutrient to others is perfectly adjusted in Floral Booster and matches the requirements of your water plants. The well-balanced proportion of nutrients is

important to prevent a surplus of a single nutrient, resulting in deficiency symptoms.

FADENALGENVERNICHTER

- *the centre destructive filamentous algae,*
- *contains active oxygen and bacteria spreading dead algae,*
- *free from heavy and organic metals,*
- *the immediate effect.*

Söll FadenalgenVernichter destroys through immediate liberation of active oxygen the even most refractory string algae in the draught 24 hours. Dead algae briefly can already be gathered landing net after applying. Remaining remainders of algae will undergo the accelerated schedule thanks to special bacteria. Söll FadenalgenVernichter is colourless, and active substance (the peroxide of hydrogen) becomes spread after several hours on water and oxygen.

Dr.ROTHS TEICHKLAR

- *elaborate the microorganisms mixture enabling the cleaning of the pond itself*

Natural, mikro biological cleaning and the nurturing of the gardens pond. He prevents the blooming of algae . He assures biological equilibrium the biological schedule of sunken leaves, dead plants, fish, the alimentary and different remainders of organic remainders excrements Activates.

TEICHSCHLAMMENTFERNER

- centre to removing from the water pond of demersal settlements and silting

The layer of slime becomes thanks to our patented combination of minerals actively peroxidized, and he the same undergoes well-planned. Heavy and different metals dangerous for the fish the components as phosphate, being the basis of the food of algae, they undergo the bond. The visible schedule of the layer of slime is the result and effective prevention the blooming of algae. Scents rotting become neutralized immediately. Bacteria assure clear water. Microorganisms about the large activity begin the schedule of slime immediately, dead algae, remainders of plants, leaves and toxic substances for the fish. They assure clean, healthy pond water in this way.

THE pH-MINUS

- the centre pH-Minus to the quick reduction of the high (basic) level pH in ponds.

Lowering pH counteracts sharp poisonings ammonia immediately and lacks indispensable plants CO₂. The pH-Minus does not contain any centres the complexus and he does not leave any remainders in water.

ZEOPOWER

- Zeo the lithium is the clean natural mineral product, which can exchange the ions of water with contained ions in zeo the lithium
- dirts removed from water through the absorption of the mineral
- he the capacity of convertible ions is limited and also depends from the quality of the natural mineral.

ZeoPower sreactivate of the activity the zeo of lithium in two the phase process. In first dirts absorbed in zeo lithium become removed the surface of the mineral to phaze. Subjected the special working "law suits IP60"becomes in phaze second zeolit. This allows to renovation of the capacity of the absorption of the phosphate and the schedule of the relationships of nitrogen enlarges through the delivery of fresh active oxygen.

ZEOSPEED

- ZeoSpeed is applied in the aim of the bond of contained phosphates in water and breaking the mixtures of nitrogen
- quick removal of these substances from water, being essential to the growth of algae, he prevents effectively their increase
- "the Lack of phosphates, lack of algae!"

Zeo lithium is the clean natural mineral product which can remove the ammonium from water. The capacity of convertible ions is limited and also depends from the quality of the natural mineral. In the aim enlargement of the effectiveness the zeo of lithium the special "process IP60"was applied in the preparation ZeoSpeed. This produces the capacity of the absorption of phosphates and the schedule of the mixtures of nitrogen enlarges thanks to active oxygen.

FILTERSTARTERBAKTERIEN

- this filterstarterBakterien elaborate natural microorganisms in the very large concentration.

FilterstarterBakterien assures the quick schedule of harmful substances and the stress removes the factors creative. They become more resistant and more enduring in the fish this way.

Aqua-Check - the sophisticated water test kit

- Accurate and exact results of pH-value, KH (carbonate hardness) and nitrite concentration

Aqua-Check water test kit helps to determine the water quality and as a result of that allows to create the ideal living conditions for aquatic plants and fish in your pond. The water can be analysed after a partial water exchange, a complete water exchange or just to monitor the quality of the water periodically.

ZIERBRUNNENKLAR

- the centre to internal and external fountains

- he is useful the clearness and enlarges the decoration of water

ZierbrunnenKlar is useful natural freshness to internal water installations. Dirty command first to clean the installation in the strong case. You should then fill up her fresh water and add ZierbrunnenKlar. Water designed to decorative aims stays thanks to ZierbrunnenKlar free from algae and he looks fantastically.

He prevents the contamination algae. He is also suitable to peaceful ponds.

Designed to decorative kolumn, decorative fountains, he not stock with fry peaceful ponds etc

Provides for internal water installations in good he will stand up by the longer time.

SPRINGBRUNNENKLAR

- the centre to internal and external fountains ,

- he prevents the formation of algae and stone sedimentary

SpringbrunnenKlar is useful water installations inside and outside natural freshness and he prevents the contamination algae. The formula of this smooth preparation is harmless for the surface and he does not quarrel from no the centres disinfectant, serving to the preparation of water in fountains and decorative fountains inside and outside. Unsightly calcareous settlings become removed and one prevents in this their way renewed creating. Water designed to decorative aims stays thanks to SpringbrunnenKlar free from algae and he looks fantastically.

AQUADES

- the preparation disinfectant of the water in the pool ideally

AquaDes is the smooth preparation counteracting bacteria, mushrooms and spores in paddling ponds and pools. AquaDes assures the protection against germs calling out diseases – dangerous germs become effectively worn out!

ALGENFREI

- the preparation fighting the algae in the pool effectively

Against algae in small pools or paddling ponds. Slippery settlings from algae arise in the periods of the time he is not at all in whose water or chlorinated not sufficiently. Slipping on algae makes up the frequent cause of incidents. He does not quarrel from no the centres disinfectant, serving to fertilise of bath water.
